

Boom Lifts

Boom Lifts Training Kitchener - Boom Lifts are a table lift piece of equipment which could be lifted or lowered to differing heights, making this equipment a handy tool for many industrial uses. There are some distinctive varieties of Boom Lift consisting of knuckle booms, scissor platform lifts, and aerial platform lifts, each operating differently.

The regular aerial lift variation is often used at skiing lodges to transport people who are not comfortable using the ski lift. Working in a manner analogous to that of an elevator, snowboarders are transported up the mountain gradually, stopping at stations along the way until they access the summit. Aerial hoists are also utilized in construction, transporting people securely up and down the sides of multi-level building sites.

Scissor hoists are also in the boom jack category. They are used frequently by utility companies as an idyllic system to allow staff to finish maintenance and repair on wires and cables that are attached to poles. Telephone, cable and power companies have relied on the effectiveness of this type of boom lift for years.

The knuckle boom lift is built for use within locations of bumpy terrain and where the need to reverse course may be required. This style of boom jack has the capability to fit in tight spots where a scissor jack cannot fit. Working among multiple machines in a production facility or in close proximity stuck between two walls, the knuckle boom additionally features a standard table outfitted with rails for security and employee safety.

Based on the job requirements and the sort of work to be completed will ascertain the appropriate type of boom lift to choose. Fortunately, there is a model suited for practically any application.
